8. Conclusion

PROBLEM STATEMENT

- Current Situation:** The company seeks to implement a fair and motivational bonus structure for its employees.
- Challenge:** Ensure that bonus distribution aligns with the company's equity principles and rewards outstanding performance.

PROJECT OVERVIEW

- Objective:** Establish a structured bonus system that acknowledges and rewards the efforts of male and female staff members.
- Scope:** This project involves defining and communicating the bonus amounts and ensuring the process is transparent and equitable.

WHO ARE THE END USERS?

- **Target Audience:** Male and female staff members across all departments.
- **Impact:** Employees will understand the bonus distribution criteria and feel valued for their contributions.

OUR SOLUTION AND ITS VALUE PROPOSITION

■

- Rationale:** This structure aims to recognize and incentivize performance while also addressing potential gender-related compensation disparities.

- Proposed Bonus Structure:**

5	5000
4	4000
3	3000
2	2000
1	1000

Dataset Description

- Employee Data Set = Edunet Dashboard
- 9 Feature they are provided.
- 5 features are taken to data analysis
- They are:
 1. Emp Id = Value & Number
 2. Name = Text
 3. Gender = Male, Female
 4. Employee Rating = numerical value
 5. Bonus = 5-5000,4-4000,3-3000,2-2000,1-1000.

THE "WOW" IN OUR SOLUTION

•=IF(J2=5,5000,IF(J2=4,4000,IF(J2=3,3000,
IF(J2=2,2000,IF(J2=1,1000))))))

MODELLIN

G

COLLECTION OF DATA SET :

- The data was collected from the edunet dash board
- And all the data was alignment and there are 7 features are given
- In these 7 features as that I was selected the 3 features to analysis the employee rating form the employee data base.

FEATURES COLLECTING:

- In the data base their was an blank cell are in the data
- To remove the blank cell first used the conditional formatting tool used to highlight the black cell with the filling of color

- After filling with the color of the blank cell .
- With the help of the slicer & filter option removed the blank row and color in the dataset.

DATA HIGHLIGHTING:

- In the given 7 features we have to highlight the feature which we have to analysis the date
- Emn Id, name, gender, employee type , increment amount.

RATING LEVEL CALCULATION:

- The increment amount are calculated by the formula of `=IF(J2=5,5000,IF(J2=4,4000,IF(J2=3,3000,IF(J2=2,2000,IF(J2=1,1000))))).`
- The value of bonus is based on employee job rating. if employee has 5 rating if he/she will get 5000 as bonus, if employee has 4 rating if he/she will get 4000 as bonus, if employee has 3 rating if he/she will get 3000 as bonus , if employee has 2 rating if he/she will get 2000 as bonus , if employee has 1 rating if he/she will get 1000 as bonus.

PIVOT TABLE:

- In the pivot table they are used to summarize the data which are provided in the data set.
- The important column are selected in the pivot table are Emn Id, name, gender, employee type, increment amount.
- They are customize in the pivot table option
 - Bonus =Rows
 - Gender= Column
 - Name= Filter
 - Count of job rating = Values

GRAPH CHART :

- In the analysis the important thing we have to insert the graph chart .
- The recommended chart we can select the data are shown in the data.

- In the graph chart they are shown the trend line of the data set which we have selected in the table
- In all the data are selected and we have to name the graph chart of the data “ bonus amount of employee on salary”
- each and every line and diagram are provided in the chart

SLICER& FILTER:

- in the slicer and filter they are provided the summarizing the data in the short list.
- In these are provided under the heading are in the greater of the option .
- After selecting the dialogue box the new box will appear and select which data are used to provided under the pivot table.
- The data are provided in the pivot table , graph chart, slicer.

RESULTS

FINDINGS

Findings:Equity Considerations: The proposed bonuses is based on employee's work performance and job rating.
Impact Assessment: Initial feedback and analysis suggest that the proposed bonus amounts are well-received and align with performance expectations.

conclusion

- Summary:** Implementing a bonus structure aligns with company goals of fair compensation and performance recognition.
- Next Steps:**
- Communication Plan:** Clearly communicate the new bonus structure to all employees.
- Feedback Mechanism:** Establish a process for collecting employee feedback and addressing any concerns.
